EDUCATION

The Ohio State University

Columbus, OH

B.S. Computer and Information Sciences — GPA: 3.78

Aug. 2023 – May 2027 (expected)

- Specialization: Information Computation Assurance
- **Buckeye CyberCorps SFS Scholarship Recipient** (U.S. government cybersecurity scholarship with service commitment)
- CTF Lead, Cybersecurity Club: organize and lead Capture-The-Flag competitions focused on cybersecurity challenges including web exploitation, cryptography, and reverse engineering
- Relevant Coursework: Operating Systems, Computer Networking, Web Applications, Low Level Programming

M.S. Computer Science and Engineering (Combined B.S./M.S. Program)

May 2028 (expected)

CERTIFICATIONS

- CompTIA Security+ (In Progress, Expected 2026)

EXPERIENCE

Program Instructor

May 2026 – Present

Tech Corps

Columbus, OH

- Taught foundational artificial intelligence concepts through hands-on instruction and guided problem solving
- Provided support to high school students, improving accessibility to technical education

Undergraduate Teaching Assistant

January 2026 – Present

The Ohio State University

Columbus, OH

CSE 2431: Operating Systems

- Guided students in low-level systems programming concepts including memory management, processes, and concurrency
- Assisted with debugging C programs and analyzing system-level behavior in Linux environments

CSE 3901: Web Applications

- Mentored students in full-stack web development and debugging modern web applications
- Provided guidance on input validation and secure coding practices in web applications
- Administered GitHub Organization for projects, repositories, and access control across multiple teams

PROJECTS

Custom SIEM Tool | *Python, Linux Logs, Security Monitoring*

- Built a lightweight SIEM tool on a Raspberry Pi to ingest, parse, and analyze Linux system logs in real time
- Developed a detection engine with custom rules for SSH brute-force attacks, failed login thresholds, and privilege escalation events
- Designed modular rule-based detection pipeline for scalable threat analysis
- Simulated SSH brute-force attacks to validate detection accuracy and rule effectiveness

CTF Writeups Repository | *Web Exploitation, Cryptography, Forensics*

- Documented solutions to Capture-The-Flag challenges across web, cryptography, and forensics domains
- Utilized professional tools such as Burp Suite and Ghidra to find vulnerabilities
- Analyzed and exploited vulnerabilities including insecure authentication and cryptographic weaknesses
- Demonstrated problem-solving and applied security knowledge through detailed technical writeups

High-Performance TCP Port Scanner | *Python, Asyncio, TCP/IP*

- Developed an asynchronous TCP port scanner capable of scanning large IP ranges efficiently
- Implemented banner grabbing to identify running services and potential vulnerabilities
- Implemented concurrent scanning of multiple targets to simulate real-world network reconnaissance scenarios

TECHNICAL SKILLS

Languages: Python, C, Java, JavaScript/TypeScript, Ruby, Bash

Security & Systems: Linux Systems, Network Scanning, Log Analysis, Web Security (OWASP Top 10)

Tools: Burp Suite, Ghidra, Wireshark, Git, Linux
